

SECURITY SERVICES

WHAT EFFECT WILL A SECURITY BREACH HAVE ON YOUR COMPANY?

Is your network prepared to detect and prevent malicious code or a hacking attempt? You have made a significant investment in building your company's information technology and corporate data. Those assets are too valuable to be protected by just anyone.

ILLUMEN'S SECURITY SERVICES

Vulnerability Assessments

Know the security posture of your network and what steps are necessary to ensure your business is safe from computer based threats

Security Policy

Proper IT security begins with defined security policies. Create a security policy tailored to meet the needs of your organization

Firewall

A firewall that is properly configured and managed will allow you to regulate traffic flow in and out of your network and protect against malicious code and hacking attempts.

Intrusion Detection and Prevention

Protect your organization from malicious code embedded in the traffic you allow into your network.

Access Management

Today's networks have multiple points of entry. Ensure controls are in place to grant access at each entry point only to those who need it.

Virus Protection

Prepare for the latest viruses, trojans and worms. Deploy proactive virus protection for your network that is regularly updated and monitored.

Content Filtering

Keep inappropriate or offensive material out of your company. Ensure that all company Internet use and e-mail adheres to company policies regarding decency and information sharing.

Spam Filtering

Spam e-mails tax network resources, impact employee productivity and often contain malicious content. Filter unwanted e-mail before it reaches your network and ensure all desired e-mail reaches your inboxes.

THE NETWORK SECURITY LANDSCAPE IS CHANGING

Threats to network security are more prevalent and more advanced than ever before.

Passive security measures are no longer sufficient to protect businesses from modern trojans, worms, viruses, or hacking attempts.

A company that has not developed a plan to regularly identify security vulnerabilities and take steps to secure them will become victim of a security breach.

If you want to protect your technology assets and data from all threats, contact Illumen for a free initial consultation.
